

RemotePoll™

No longer be confined to a single area. Extend your audience response meetings across cities, states and even countries.

RemotePoll distance learning solution **extends Audience Response functionality** to allow a presenter to poll audiences using our hardware or the individuals own web enabled device in multiple remote locations and immediately display the results in conjunction with those of the hosting site. **RemotePoll provides instantaneous feedback for the presenter** and helps keep the remote audience engaged by displaying their input.

Participants in remote locations now have an easy to use, non-intimidating means of answering questions during video conferences or satellite broadcasts.

No longer rely on individuals to stand up in front of a camera, speak into a mic, and present their answer. Gather feedback and gauge understanding from multiple locations with the power of audience response technology. Instructors and presenters can quickly assess understanding and gather data in a way that is more approachable for participants.
