

## ResponseWare

**ResponseWare - the revolutionary response system for mobile devices - turns a participant's web-enabled mobile device into a virtual**

**ResponseCard.** ResponseWare allows participants to respond using a Wi-Fi or data connection.

Turning's mobile response solution allows alphanumeric entry via a cell phone style input or a QWERTY style keyboard. ResponseWare allows the user to respond to multiple styles of questions, such as: multiple-choice, alphanumeric and multiple response questions. The diversity of response types increases communication options and allows users to easily submit questions electronically during an interactive polling session to the presenter. ResponseWare also displays the question and answer choices on the device while polling and is compatible with TurningPoint assessment software.

### **Innovation for Mobile Technology**

The combination of ResponseWare with Turning's easy-to-use ResponseCard clickers creates the most advanced available option for audience input devices to date. Since the growth in popularity of multi-purpose, Internet-ready personal devices as well as the broad availability of wireless Internet connectivity, Turning chose to develop the next generation in response technology; a solution that could take

advantage of mobile computing, making for a convenient, cost-effective response system.

### **User Options**

ResponseWare requires no special software to install or configure and no need to alter firewall or port settings. The system supports nearly all JavaScript<sup>®</sup>-enabled web browsers across multiple platforms and operating systems. Turning Technologies provides all of the hosting and web services necessary for a ResponseWare web-enabled interactive polling session, which eliminates the need for any organization to host, maintain, and support the application and allows for immediate utilization of the response technology.

### **Device Specific Applications**

Participants can download ResponseWare for iPhone<sup>®</sup>, iPod touch<sup>®</sup>, iPad<sup>®</sup>, BlackBerry<sup>®</sup> smartphone or Android<sup>™</sup> device to take advantage of the specific features and functionality available with the device. ResponseWare is certified on the AT&T<sup>®</sup> wireless network.

### **Licensing Models**

Turning Technologies offers a variety of ResponseWare licensing models to best meet your presentation needs and environment. In addition, ResponseWare can be used seamlessly in mixed environments alongside traditional ResponseCards or separately.
